### Course Overview

This course introduces students to the field of language learner autonomy by exploring the key theoretical ideas, practical approaches and research agendas. It begins with the origins, definitions and theoretical underpinnings and unpacks dimensions such as learning management, affective factors, social factors, resources and strategies. The course also has a very practical element and examines practical approaches to fostering autonomy both inside and outside the classroom. It examines resource-based approaches, learner development, curriculum-based approaches, ways to research autonomy, and the roles and development of teachers and learning advisors.

## Course Objectives

At the end of the course, students should be able to:

- define learner autonomy.
- provide a basic overview of some of the dimensions associated with learner autonomy (i.e. learning management, social factors, affective factors, learning strategies, and reflection).
- discuss the roles of teachers in promoting learner autonomy.
- explain what advising is and how it is different from teaching.
- identify ways to research learner autonomy.
